

Jay Vaghela

DevOps Engineer

Ahmedabad, Gujarat, India | +91 9033841360 | jayvaghela0312@gmail.com | LinkedIn | GitHub

Professional Summary

DevOps and Cloud Engineering enthusiast with practical experience developing cloud-native applications, automating deployments, and managing infrastructure using AWS, Terraform, Docker, Kubernetes, and GitHub Actions. Proficient in Python, Flask, Linux, and Infrastructure as Code (IaC), with hands-on experience in CI/CD, containerization, cloud monitoring, and backend development. Passionate about building secure, scalable, and highly available systems while continuously expanding my expertise in cloud technologies and DevOps automation.

Technical Skills

Languages: Python, Java, JavaScript, SQL, HTML5, CSS3

Frameworks & Libraries: Flask, Jinja, SQLAlchemy

Cloud & DevOps: Shell Scripting, AWS, Docker, Jenkins, Grafana, Kubernetes, Terraform, Git, GitHub

Core Competencies: Infrastructure as Code (IaC), Cloud Infrastructure, Cloud Monitoring, DevOps, Containerization, Continuous Integration, Continuous Deployment, Linux Administration, Version Control, REST APIs

Soft Skills: Teamwork, Collaboration, Communication, Adaptability, Continuous Learning, Time Management

Projects

FlaskNote

Python, Flask, HTML5, CSS3, Docker, GitHub Actions, SQLAlchemy

- Built a secure notes management web application using flask, resulting in a fully authenticated, multi-user platform with isolated data access.
- Designed end-to-end Signup, Login/Logout authentication workflows using flask, resulting in secure, user-specific note management.
- Engineered relational database models with SQLAlchemy, resulting in scalable and normalized storage for users and notes.
- Containerized the full application using Docker, resulting in reproducible, environment-agnostic deployments.
- Automated build, test, and deployment workflows using GitHub Actions, resulting in faster and more reliable releases.
- Applied clean architecture and DevOps best practices, resulting in a maintainable and version-controlled codebase.

AWS S3 CloudFront Monitoring

AWS, Amazon S3, CloudFront, CloudWatch, SNS, IAM

- Designed and deployed a highly available static website architecture using Amazon S3 and CloudFront, resulting in low-latency, globally distributed content delivery.
- Configured CloudWatch metrics and alarms to continuously monitor CloudFront RequestCount, resulting in proactive detection of traffic anomalies.
- Implemented event-driven email notifications using Amazon SNS, resulting in real-time alerting for infrastructure events.
- Applied IAM least-privilege best practices, resulting in secure and auditable management of cloud resources.
- Demonstrated practical expertise in cloud observability, CDN architecture, monitoring, and event-driven AWS services through hands-on implementation.

Certifications

Completed

- DevOps on AWS: Project Management — Coursera
- Python Crash Course — Coursera
- AWS Cloud Practitioner Essentials Training — AWS Skill Builder

Currently Learning

- Automation and Scripting with Python — Coursera
- DevOps and AI on AWS: CI/CD for Generative AI Applications — Coursera

Education

Shri Chimanbhai Patel Post Graduate Institute of Computer Applications

2025 – Present

Master of Computer Applications (MCA)

Silver Oak University

2022 – 2025

Bachelor of Computer Applications (BCA)
